

Window & Door Spray Foam Insulation

We decided to turn our one car attached garage into a room, so we installed two windows in the place where the garage door was. Our new wall has been insulated, and now it is time to insulate around the windows. We used DAP's No Warp Window & Door Sealant, according to directions listed on the canister.

If possible, try to lay down a thin, even stream of foam, as shown above.

If you accidentally get out of control, like I did, don't worry! Allow the foam to dry (in about 4 hours) and you can easily cut away the excess foam with an exacto knife or box cutter.
